Open questions:

13.	What did you like particularly in this subject?	15	Open question	44.12
13.1	Everything is nice. Its just too fast. and 14 weeks is not enough for us to be a master in animation			
13.2	use software to animate models			
13.3	Thanks to Jimmy! He always makes great notes after classes. It is really help me a lot-			
13.4	I like the final project because we saw every points of a 3D animation			
13.5	professions from the teachers. basic fundamental skills and able to make a animation			
13.6	to make my own made animation video			
13.7	That teach very clearly each topic of the subject, and take the time so supervise the student.			
13.8	A very detail filled class which I loved. I had a strong learning curve in this class and I had never used a 3D program before. I now feel confident to continue my use of Maya in a professional manner. In particularly Jimmy Gunawan went above and beyond in helping the students. He is a wealth of knowledge in the subject and is an asset to the UTS staff.			
13.9	i love draw or design cartoon or game content since i was young, thank UTS give me such good oppurtunity to practice and make my dream ture, and also i want this to be my career in the future			
13.10	I liked the core work of the class, with experimenting with different character designs, animation techniques and other aspects of our work within the Maya framework. I feel the class is a very good introduction to 3D Animation.			
13.11	Jimmy and Rob are really good teacher, they taughted us a lot of uesful things and skills.			
13.12	The actual tips and quick step with getting familiar with the program.			
13.13	the subject document online is very useful.			
13.14	Friendly teaching environment, lots of materials available online.			
13.15	The balance between technical and storytelling training and the excellent feedback and support

14.	Please suggest any improvements that could be made to this subject.	18	Open question	52.94
-----	---	----	---------------	-------

- 14.1 I think things can be a little bit slow where we practice with more assignments and not just 3.
- 14.2 I think this semester should give student a very smooth start and basic skills before it takes to deeper stage even though this is a master course. In overall I don't feel comfortable to do this course as the requirement is too hard to meet and learn so many things in such short time for people who doesn't have strong 3D experience or background. I believe I won't be the only one feel difficult to catch the pace if they do not have strong 3D background, but that's the reason this course for (to learn 3D and Maya). Animation is a big job as it takes time to build up the whole thing, but this course only for half year and expect to learn so much in such short time. So I think this course workload and requirement is not very appropriate and student doesn't learn it in efficient way. We are more like chase the pace rather than learning and understand how to use this software well and be able to do some creation from it.
- 14.3 the teacher should make more small excercises in class that everyone can follow.. the only one was the boucing ball but many people didn't get explanation. it should be made by everyone step by step
- 14.4 hard to find a computer in design building
hard to have an access to the lab room
jimmy is really busy at the end too many people ask him some question. He s doing a really good job, but maybe one more person to help the student should be really great
- 14.5 too much too be taught in 13 weeks.
- 14.6 Jimmy is not a good teacher. when i show him the stroyboard, he did not think at all. and coming out with ' make no sense'. what is 'make no sence'? it's not no sence,the reason he said that is that he didnt understand. stupid teacher.
- 14.7 I think team project will also help in the subject. In addition, I wish lectures were recorded by video camera or screen capture. So students be able to watch the lecture at home as well. This system is applying in other universities. Specially for this lecture. It is highly recommended.
- 14.8 please the next time small groups, now in the class are more than 20 students, it if possible only 18 is good
- 14.9 The subject matter - there is too much tought in too little time. There is too many people in this class for the teacher and assistant to make sure everyone understands the subject matter. The class room is poorly set out to be able to hear what is being said by the teacher and for half of the room you are not even facing the projector. Over all Rob knows what he is talking about - but he goes over the subject matter to quickly - this is because he has too much to cover in one semester. I was unhappy with this course as it took up too much time to understand what i was being tought and then completing the work. I felt like I could not approach the teacher and ask some of the questions that might take more time to answer as he had to be avaiable for too many other people.
- 14.10 Online books & resources should be made readily available for students
- 14.11 good
- 14.12 Class notes could be better organised; previous years notes are mixed in with this current years, which makes catching up on certain details confusing sometimes if this semester's class deviates a bit from where the previous one went.
- 14.13 Nothing is bad, so keep going on is good
- 14.14 Final project is definitely an ideal goal, but would appreciate if the final is broken down a bit more again.
- 14.15 it will be better if there are not so many students.
- 14.16 I really enjoy this subject through the whole semester. If there is anything that I can suggest, then it would be the model we used in the lecture. I think it would be great if we stuck to the same 3D model from modeling to rigging and skining and animating and then rendering... It might be easier to following...
- 14.17 Smaller class.
- 14.18 smaller classes to give more time for feedback

Scale	SD - strongly disagree	D - disagree	N - neutral	A - agree	SA - strongly agree
